

AUTUMN PRODUCT LAUNCH 2026

Press release. Götzens, September 2026.

With the Autumn Product Launch 2026, PROLICHT is expanding its portfolio to include new luminaires, additional system options and striking finishes. The focus is on ILUNA, IMAGINE FRAMER and the further developed INVADER family, as well as new options for FORTIES and IMAGINE and five new PROLICHT ATELIER colours.

ILUNA expands the PROLICHT ACOUSTIC family with a decorative pendant luminaire that combines light and acoustic comfort. The acoustic slats define the luminaire's appearance whilst simultaneously concealing the light source from direct side views. ILUNA is available in CONE and ROUND versions in three sizes and can be fitted with BILO, INVADER, SIGN or an E27 socket.

With IMAGINE FRAMER, the IMAGINE family gains a new solution for precise contour lighting. Round and rectangular light projections can be precisely adapted to objects and architectural elements, enabling controlled accent lighting with a clearly defined visual focus. In addition, the new SUPER NARROW light distribution for IMAGINE SURFACE and RECESSED expands the optical spectrum to include particularly concentrated accent lighting.

INVADER has also been further developed: an optimised reflector system ensures controlled, comfortable light; INVADER M offers a significantly higher luminous flux; and the entire XS, S and M ranges are now IP65-certified. A new 2400K option and additional light-shaping possibilities expand the range of applications.

The five new PROLICHT ATELIER colours – Champagne Metal, Dark Titanium, Natural Copper, Rusty Inspiration and Gold Standard – offer greater design freedom. These special finishes are available for selected components from the IMAGINE, BIONIQ, INVADER and MAGIQ ranges and allow for targeted colour accents within architectural concepts.

Furthermore, the FORTIES range is being expanded to include new IMAGINE and MAGIQ inserts. This allows linear lighting, accent lighting and downlighting to be combined within the compact 45 mm profile.

With these new products and additions, PROLICHT is creating further possibilities for precise, bespoke and holistic lighting concepts.
