GEOMETRIC PROGRESSION

PROLIGHT
designed to create

SHAPE

glorious

glorious

glorious

The GLORIOUS family is based on three fundamental geometric shapes that transform light into architectural features. The circular version creates balanced, continuous compositions; the triangular version introduces dynamic, spatial accents; and the square version defines structure and clarity. All geometries share the same system logic and can be combined consistently across different scales and applications.

glorious

glorious silhouette

The Glorious Silhouette and Quantum Silhouette are ultra-slim pendant luminaires with a minimalist, lightweight design. Based on circular and square geometries, they are available in various sizes. Installed horizontally, they can be combined in single or multi-level compositions to create sculptural lighting arrangements with a clear sense of rhythm, depth and spatial orientation.
